- Sends Pictures, Music and Videos to other Mobile-phones via Bluetooth

Multi-format Card Slot for SD/MMC/MS Memory cards directly from your digital camera

BridgeMan™ connections

BridgeMan™ remote control

Mobile-phones have become people's most important Instrument, accompanying us wherever we go. We take Pictures and Videos with our Mobiles and use them to listen to Music, Radio and watch TV, etc. The big problem, however, is the small Picture Format Mobiles have. How can you truly enjoy those Pictures and Videos taken of your loved ones?

"Enjoy Life" (ENOX's slogan) is our goal for our Customers. We have set out to achieve this goal for our Customers with innovative, aesthetic solutions, enabling them to enjoy life even more.

BridgeMan™ is one of our solutions to do so. In combination with a compatible, Bluetooth-capable Multimedia Mobile-phone, it offers the possibility of viewing Pictures and Videos as well as listening to Music on Television-sets/other Media. It is possible to present with no problems: Pictures in JPG Format, Videos in MP4 Format and Music in MP3 Format; And, depending on the resolution of the Mobile-phone Camera, the quality is very good or excellent. Using BridgeMan™ results in no losses in the quality of presentation. On the contrary; It upscales and improves.

An additional SD Card Slot and a connection for USB Sticks make it possible to display Pictures and Videos on a Television directly from a Memory Card or to play back Music from an MP3 Stick.

Files transfer from the Mobile-phone via Bluetooth. Similar to the way an SMS is sent, you select the Picture on the Mobile and transfer it to BridgeMan™. Then the file is stored in a 128-MB Flash Memory incorporated in BridgeMan™, and can be displayed on a Television. Files stored in the Flash Memory can also be transferred to other Mobiles.
